How do I format? What is wrong with my SD card if the computer can not format my SD card? How can you fix a micro SD card that cannot format or delete files? An SD card or Secure Digital card is the biggest asset these days when we are all inclined to digitization. Contrary to its tiny size, it helps to a greater extent. It can be used for electronic gadgets such as mobile phones, laptops, digital cameras, portable media players to name a few, and saves a lot of GBs at once. Users also use it to transfer their data or save data as a backup. However, as in the past, there are many others who have encountered an exact problem, i.e. can not format SD cards. If you are also one of them, you might be having a lot of doubt in your mind as to why your Micro SD SD and what can be done in such circumstances. So to help you, we are here with some beneficial information that certainly serves your purpose. Before we take you to the SD card will not be formatted problem, we would like you to learn more about the problem. You should always know the possible reasons related to this issue. And so in this section we will share some of the reasons that will answer you why you can not format the SD card. We know how important your SD card is to you because it acts as a greatly expanded storage medium for your device. However, given life, the SD card is prone to get damaged. And if you continue inserting and removing it from different devices, the problem is bound to happen and where comes formatting SD card handy. But when you try to do it, you don't have to do it. Why? Your mind might be murmuring a lot of things when such a situation arises. However, you no longer have to think much, because these points will figure out your doubts. Have a look! Sd Card Write Protection: One of the reasons why you can't format an SD card is write protection. Your SD card might be write-protected, so Windows can't read it, or make further changes or settings. Invalid sectors: Another reason could be bad sectors on the SD map. And as a result, the card is no longer active and is damaged. Not to mention, Windows will not be able to format a corrupted SD card. System file errors on the SD card: Your SD card may be damaged for some other reason. This can be caused by system file errors. And you already know that Windows will refuse to work with a damaged SD card. Virus Infection: Finally, the culprit could be a virus or malware. You may be connecting your SD card to multiple devices or card readers. And to do this you can easily pick up unwanted viruses. Therefore, the sd card cannot be formatted using windows. Part 2: Quick solutions for repairing an SD card can't format an error Now you can go to solutions that can help fix an SD card that won't format the problem. We'll learn four different ways you'll also learn how to format your SD card using different methods. Let us now get to know the instructions for each process. Solution 1: Remove Write Protection for SD card Write protection simply means that your SD card is set as a read-only feature. And so this could be why you can not format the SD card. If this is the case, all you need is to remove the write protection from your SD card to make it work smoothly. So to determine micro SD will not format the error, the first solution is this, and here are the steps to follow. Step-by-step Tutorial Step 1: Run the run box first by using Windows and R keys. Step 2: In the box, enter diskpart, and then press the Enter key. Step 3: The diskpart window will come where you need to enter the following commands. Make sure that the enter after each command below. Here are the following: A list of disk select disk # (here # is the disk that is having write protection partition) attributes disk clear only you need to close the window when you will be displayed diskpart attributes cleared successfully. This means that the problem is resolved when the SD card cannot be formatted. Solution 2: Format an SD card with a third-party SD card formatting if you have finished removing write protection from your SD card and still encounters a problem, you must format the SD card using a third-party SD card formatted. When you browse online, you explore the plethora of options to get the goal solved. One of the following may be formatted by the SD Association. These third-party utilities can help you deal with various SD card issues. So, look for the best option and get rid of the SD card will not format the issue. Option 3: Format the SD card with CMD Here is the next way to solve the problem Micro SD card will not be formatted. You can do help at a CMD or command prompt, or you can say cmd.exe. Command Prompt helps you manage various problems, such as hard disk errors or system problems, and so on. And if the above fixes made no sense, you can just try this if you can't format the SD card. Here's what you need to do. Therefore, if you are not satisfied with the team idea or are not familiar with it, we do not recommend formatting your SD card this way. Step by Step Tutorial Step 1: Open a command prompt in the first place, and for this you can just type cmd in the search box and select Command Prompt from the menu. Or, you can right-click the Start menu and choose Command Prompt from there. Step 2: When the window opens, wait a second and type Diskpart, and press the Enter button. Step 3: Go with the following commands. And as mentioned above, make sure to press the Enter key after each command. list disk select drive # (Here # is the disk number) list partition select partition # (here # is partition number) format fs = NTFS fast The above commands will help your SD card become formatted quickly and you will not have to worry about the SD card will not be formatted issue. Solution 4: Format the SD card with disk management To manage drives and partitions in the system, you can use Windows Built-in Partition Manager, which is Disk Management. It can be used for serving a variety of purposes such as partition creation, partition deletion, and the like. And we will use it to format the SD card in this section as a solution if you can not format your SD card. Let us know how you can do it. Step-by-step Tutorial Step 1: Start right-clicking the Start menu and select Disk Management option from the menu. Alternatively, you can open the run box using the Windows + R key combination and type diskmgmt.msc to launch Disk Management. 2: Now select the partition SD SD you want to format. Optionally, right-click it and select format option. Step 3: In the popping up window, specify the volume label, file system, and allocation unit size in the corresponding fields. Hit on OK after that. Please note that the option with The Quick Format is selected by default. You can uncheck if you don't want the full format. Also, deleted data will not be recoverable. Step 4: Now, you have to confirm the process by hitting on OK again. Bonus Tip: How to recover lost data from a micro SD card with will not format an error If your SD card is still stuck with will not be formatted error and you want to get your lost data back, worry not.
